Abstract

The aim of this research is to describe the factors that influence students' entrepreneurial interest. The method in this research is a literature study with descriptive methods. The journals used in this research consisted of 9 journals with similar research themes, namely factors that influence students' interest in entrepreneurship. The results obtained in this research are that students' interest in entrepreneurship can develop due to two factors, namely internal factors and external factors. Internal factors include personal (internal), university, external and information, self-efficacy, freedom to work, visionary, expertise. Considering that universities have quite a large influence, entrepreneurship courses and programs in universities should be made as good as possible to foster entrepreneurial interest among students. Besides, the values and encouragement that individuals have regarding the social conditions around them will trigger them to think and do something. The implication of this research is to provide knowledge of factors that can support the formation of interest in entrepreneurship in students.

Keywords: Factors, Interest in Entrepreneurship, Students
INTRODUCTION

Entrepreneurship is one of the important things in developing a country's socioeconomic growth (Peterson & Lee, 2000). Entrepreneurship is considered to be able to help provide many job opportunities, increase prosperity and the level of competition in a country, various consumer needs, and services. Apart from that, entrepreneurship is also increasingly becoming an important concern in facing the challenges of globalization, namely global economic competition in terms of creativity and innovation (Peterson & Lee, 2000). This is because organizations that are skilled at innovation, successful in producing new ideas, will gain a competitive advantage and will not be left behind in the world market which continues to change rapidly (West, 1997). Thus, Suryana (2006) also states entrepreneurship as the ability to create added value in the market through the process of combining resources in new and different ways.

The entrepreneurial growth of a country is also the responsibility of the role of universities which educate and provide entrepreneurial skills to their graduates and provide motivation to dare to choose entrepreneurship for their students. Thus, a university of course needs to implement concrete entrepreneurial learning patterns to equip students with meaningful knowledge in order to encourage students' enthusiasm for entrepreneurship (Sudirman, et al, 2018). In this case, universities are expected to be able to change students' mindsets and instill entrepreneurial values that will shape the character and behavior for entrepreneurship or have the characteristics of being an entrepreneur, although this attitude is not fully applied as an entrepreneur (Misrah, 2019). However, in reality, there are still more college graduates who want to find work than can create their own jobs by becoming entrepreneurs. Based on a survey by the Central Executive Board of the Indonesian Young Entrepreneurs Association (BPP Hipmi), 83 percent of student respondents tend to want to become employees. Meanwhile, only 4 percent are interested in becoming entrepreneurs (Republika, 2016). One thing that influences this phenomenon is students' interest in entrepreneurship. Becoming an entrepreneur requires growing interest, and is followed by the availability of capital. According to Kotler and Keller (2016), interest is a response to an object that shows the customer's desire to do something, in this case entrepreneurship. To foster an interest in entrepreneurship in a student, it is necessary to provide motivation and knowledge about entrepreneurship, experience to become an entrepreneur directly, and also an environment that supports it, be it the school, family or community environment.

Santoso (2016) states that interest in entrepreneurship is an inner desire to fulfill life's needs, advance one's business or create a new business with one's own strengths. Furthermore, Santoso (2016) also states that interest in entrepreneurship is the tendency of the subject's heart to be interested in creating a business that then organizes, regulates, bears the risks and develops the business it creates. The phenomenon of low interest in entrepreneurship has become a serious consideration for various parties, including the government, education, industry and society. Various efforts have been made to foster interest in entrepreneurship, especially changing the mindset of students who
are only interested in being job seekers when they have completed their studies. Therefore, researchers are interested in conducting research to find out the factors that can influence the growth of interest in entrepreneurship among students.

LITERATURE REVIEW

According to Fuadi (Rosmiati, Dony T & Munawar, 2015) interest in entrepreneurship is the desire, interest, and willingness to work hard or have a strong will to try optimally to fulfill one's life needs without feeling afraid of the risks that will occur, as well as the willingness to learn from failure. Interest in becoming an entrepreneur is defined as a person's desire to work independently or run their own business. Entrepreneurial Interest according to Slameto (Djaali, 2007), namely interest is a feeling of preference and interest in something without the involvement of parties who influence it. Another definition of interest is an agreement on a relationship between oneself and something outside oneself.

Entrepreneurial interest is the desire, interest, and willingness to work hard or be willing to try to fulfill one's life needs without feeling afraid of the risks one will face, learn from the failures one experiences, and develop the business one creates. Interest in entrepreneurship can be seen from the willingness to work hard and to achieve progress in one's business, the willingness to bear various risks related to the actions one takes. The definition of interest was also conveyed by Winkel & Srihastuti (2004), namely a tendency that is slightly stronger in a person to have a feeling of interest in something and a feeling of liking to socialize in various activities related to that field.

Interest in entrepreneurship is not inborn but grows and develops according to influencing factors. Factors that influence the growth of the decision to become an entrepreneur are the result of the interaction of several factors, namely a person's personality and their environment (Bygrave, 2003). Hisrich, et al. (2005) and Alma (2010) stated that the factors that influence entrepreneurial interest are the educational environment, a person's personality and the family environment. A person's interest in entrepreneurship can be seen from two main indicators, namely: 1. how strong a person's efforts are to dare to try to carry out entrepreneurial activities; 2. how much effort a person plans to put into entrepreneurial activities (such as activities in managing time and finances for entrepreneurial purposes).

METHODOLOGY

The method used is library research. This research is a type of library research, namely research whose object of study uses library data in the form of books as a data source (Hadi, 2022). This research was carried out by reading, reviewing and analyzing various existing literature, in the form of articles published in journals and books related to the theme of factors that influence students' interest in entrepreneurship. There are 9 journals which are international journals taken from several databases such as ScienceDirect, Taylor & Francis, Springer. The author searches directly from the website or
also uses the help of Google Scholar and Research Gate. The process itself goes through three processes, namely: editing, organizing, and discovery (Sarah Adilah Wandansari, Hernawati, 2021).

**RESEARCH RESULT**

Based on the results of a review of 9 journals related to work readiness and industrial practices, the following results were obtained:

Factors influencing interest in entrepreneurship in students of the fkip uns economic education study program

This research uses quantitative descriptive methods. The population of this study were students from the Economic Education Study Program, Faculty of Teacher Training and Education, Sebelas Maret University who had taken entrepreneurship courses. Sampling was taken using Proportional Random Sampling Technique. The sample in this research consisted of 100 students. The data collection techniques used were questionnaires, observation and documentation. The data analysis technique used to measure interest in entrepreneurship uses the Ajzen formula, while to look for factors that influence interest in entrepreneurship using factor analysis called Exploratory Factor Analysis.

Based on the results of data analysis and discussion, students' interest in entrepreneurship is classified as high, namely (1) 96%, the rest are classified as moderate interest in entrepreneurship. (2) Factors that influence students' interest in entrepreneurship include (a) self-efficacy, (b) freedom to work, (c) visionary, (d) expertise, (e) availability of capital and social environment, (f) contextual, and (g) perception of the entrepreneur figure.

DISCUSSION

Based on the research results, it is known that research by Esti Dwi Rinawiyanti, Linda Herawati Gunawan (2017) shows that From the analysis of the level of importance and factor analysis, several main factors were obtained that could arouse entrepreneurial interest in students which were grouped into four factors, namely personal (internal), university, external and information. Considering that universities have quite a large influence, entrepreneurship courses and programs in universities should be made as good as possible to foster entrepreneurial interest among students. Similar research results were also obtained by Misrah (2019) which showed that there is interest in entrepreneurship students from the 2015-2018 class can grow and increase their interest in entrepreneurship for students because of the internal and external factors of each student and proven by the majority of respondents having a high interest in entrepreneurship, namely external factors were 34 out of 54 respondents (63.1%). This shows that with there are external factors in the form of encouragement from parents and influence from the surrounding environment.

Previous research by Sieger et al (2011) also shows that there are several factors that influence entrepreneurial interest in students, namely motivation, family background and constraints, where these three factors will shape behavior, attitudes and norms that influence interest. businessman. Internal factors originating from within the entrepreneur can be in the form of personal traits, attitudes, willingness and individual abilities which can give the individual strength to become an entrepreneur. Meanwhile, external factors come from outside the entrepreneur, which can be elements from the surrounding environment, such as the family environment, business environment, physical environment, socio-economic environment, etc.

Research by Yamini et al., (2020); Ayob et al., (2013); Jadmiko et al., (2022). Prosocial motivation perceived by students can increase interest in becoming a social entrepreneur. Prosocial motivation can be perceived as encouraging them to contribute to doing something about the conditions around them. The values and encouragement that individuals have regarding the social conditions around them will trigger them to think and do something. This finding is in accordance with the research results of Yamini et al., (2020) and Ayob et al., (2013) which show that intrinsic motivation has a positive effect on social entrepreneurial intention. In this way, universities are expected to be more active in creating an entrepreneurial environment on campus that can arouse the entrepreneurial spirit in students, including by providing adequate infrastructure and resources and creating a conducive environment that can shape students' entrepreneurial mindset.
CONCLUSIONS AND RECOMMENDATIONS

The conclusion of this research is that students' interest in entrepreneurship can develop due to two factors, namely internal factors and external factors. Internal factors include personal (internal), university, external and information, self-efficacy, freedom to work, visionary, expertise. Considering that universities have quite a large influence, entrepreneurship courses and programs in universities should be made as good as possible to foster entrepreneurial interest among students. Besides, the values and encouragement that individuals have regarding the social conditions around them will trigger them to think and do something.

ADVANCED RESEARCH

Based on the results of this research, ongoing research can be carried out using quantitative methods to determine the magnitude of the influence of internal and external factors on students' interest in entrepreneurship. Apart from that, this research can also be continued with experimental research by increasing internal factors such as self-efficacy, information, or providing skills to increase students' interest in entrepreneurship.
